

Chi Mei Medical Center

The park-like open design and green landscape of Liuying Chi Mei Hospital combines with an unspoiled country background to create a beautiful hospital setting. The project designers required an HVAC system composed of stainless steel pipes, and a fire protection system with grooved joints to service all areas of the building. Shurjoint Grooved Stainless Steel & Ductile Iron Couplings, Fittings & Threaded Fittings were chosen because of their ability to attenuate for noise and vibrations as well as the ease of system maintenance.
